Reasons for Allowance

1. The present claims are deemed allowable over the references of record since the references of record fail to disclose or render obvious the combined material and property limitations in the pending claims.

While the prior art of record disclose AFC magnetic recording media and coupled magnetic recording media possessing a continuous ferromagnetic layer and a granular ferromagnetic layer (e.g. *Ikeda et al.*, '670 B1), the prior art of record fails to teach or render obvious a structure comprising an AFC magnetic recording medium comprising both a continuous ferromagnetic stabilization layer and a granular ferromagnetic layer meeting the claimed structural limitations, wherein the exchange coupling strength in said continuous, ferromagnetic stabilization layer is preselected to be larger than the strength of the anti-ferromagnetic coupling provided by the non-magnetic spacer layer.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Comments

3. In order to better clarify the record, the examiner wishes to point out two references which are related to the claimed invention. Do et al. (U.S. Patent No. 6,773,834 B2 and U.S. Patent App. No. 2002/0098390 A1) disclose that the exchange coupling from the dipole fields in "continuous" ferromagnetic layers is normally less than

the anti-ferromagnetic coupling strength (*Paragraphs 0008 and 0055*). Inomata (U.S. Patent App. No. 2004/0086753 A1) teach an AFC coupled magnetic recording medium where the exchange field (H_{exc}), which is related to the exchange energy (J_{exc}), values are controlled, but fails to teach or suggestion controlling J_{exc} relative to the anti-ferromagnetic energy or of using a granular magnetic layer meeting the claimed limitations.
